****

An Advanced tutorial on Geant4
https://videos.cern.ch/record/2737282

Some good slides for physics process in geant 4 (adv course):
https://indico.cern.ch/event/866056/contributions/3648977/attachments/1949289/3550230/ParticleProcesses.pdf

Some slides for cuts and physics process in geant4:
https://agenda.infn.it/event/22667/sessions/17787/attachments/71916/90481/Pandola_-_01_-_Physics_-_2.pdf

Git repo of Geant4 examples:
https://gitlab.cern.ch/geant4/geant4/-/tree/master/examples

Good Reference in Geant4 Manual for physics list:
https://geant4-userdoc.web.cern.ch/UsersGuides/PhysicsListGuide/html/physicslistguide.html

Youtube tutorial link:

https://youtube.com/playlist?list=PLLybgCU6QCGWgzNYOV0SKen9vqg4KXeVL&si=fFJK6UU2pDHyHHw3

Physics reference manual:
https://geant4-userdoc.web.cern.ch/UsersGuides/PhysicsReferenceManual/html/index.html

G4 user action slides:
https://indico.cern.ch/event/422168/contributions/1903302/subcontributions/170176/attachments/888132/1249408/userActions.ppt

An school (given by seema): https://indico.cern.ch/event/1376434/

Slides by Dr. Sunanda Banerjee:
https://indico.global/event/8005/contributions/72273/attachments/35511/66129/Simulation01.pdf

To understand Geant4 Architecture:
https://geant4-userdoc.web.cern.ch/UsersGuides/ForToolkitDeveloper/html/OOAnalysisDesign/Run/run.html

G4 Nist material list:
https://geant4-userdoc.web.cern.ch/UsersGuides/ForApplicationDeveloper/html/Appendix/materialNames.html

A good discussion on G4 regarding photon energy at different points inside a scintillator:
https://geant4-forum.web.cern.ch/t/how-precise-can-we-get-the-position-of-an-energy-deposition-deposited-due-to-a-specific-interaction/7728

Geant4 documentation for simulation of Photoelectric effect:
https://geant4.web.cern.ch/documentation/dev/prm_html/PhysicsReferenceManual/electromagnetic/gamma_incident/photoelectric/index.html

Seema's script for filling the entries of the tree into a histogram:
https://github.com/seemasharmafnal/HF_Analysis/tree/main/HFNtupleAnalysis

A good reference on G4:
https://indico.global/event/11040/contributions/103116/attachments/47526/90017/Pandola-Physics-1.pdf

A Good reference to read about cuts:
https://geant4-userdoc.web.cern.ch/UsersGuides/ForApplicationDeveloper/html/TrackingAndPhysics/thresholdVScut.html#prothres

Good slides for primary particle generation in geant4:
https://indico.cern.ch/event/294651/sessions/55918/attachments/552022/760639/PrimaryParticles.pdf

A Good reference to see what can be done with track and steps:
https://geant4.web.cern.ch/documentation/dev/faq_html/FAQ/tracksAndSteps.html

A Good discussion on the process defining an step:
https://geant4-forum.web.cern.ch/t/use-of-getprocessdefinedstep/7880

Documentation of G4 examples:
https://geant4-userdoc.web.cern.ch/Doxygen/examples_doc/html/

A useful slide on G4 examples:
https://indico.cern.ch/event/472305/contributions/1982314/attachments/1223730/1790337/Examples.pdf

Good slides for vis manager:
https://indico.cern.ch/event/776050/contributions/3241819/attachments/1789268/2914264/Visualization2-2.pdf

A good concise reference for interaction of photons with the material:
https://www.sciencedirect.com/science/article/abs/pii/B0122274105006347

G4Doc for multithreading (for toolkit developers):
https://geant4.web.cern.ch/documentation/pipelines/master/bftd_html/ForToolkitDeveloper/OOAnalysisDesign/Multithreading/mt.html

For writing the Geant4 Intro in thesis:

==========
ECAL test beam geometry of 5x5 crystals. https://gitlab.cern.ch/dejardin/h4sim

Regarding extracting deposited energy (By Alpana on 14/02/25):
I am sharing some examples how the energy deposited in the absorbers can be extracted. These can not be directly plugged into your setup but can give you an idea on how to go about it.
1. From standalone HGCAL simulation - this may work for you as it is CMSSW independent.

Looping over all elements in your volume and add the energy deposited in each block if it is an absorber
https://github.com/pfs/PFCal/blob/2922434ce888d40acdc832d13313c1e6a8835278/PFCalEE/src/SamplingSection.cc#L207

A volume is called absorber if it satisfies these conditions. These conditions can be updated as per your geometry.
https://github.com/pfs/PFCal/blob/master/PFCalEE/include/SamplingSection.hh#L112-L124

2. This is how we were doing in HGCAL TB simulation setup
https://gitlab.cern.ch/kalpana/hgcal_reconstruction_framework/-/blob/Gen_simstep/SimG4CMS/HGCalTestBeam/plugins/HGCPassive.cc#L435

3. This code I added to extract energy leaked out of the detector,
https://gitlab.cern.ch/kalpana/hgcal_reconstruction_framework/-/blob/Gen_simstep/SimG4CMS/HGCalTestBeam/plugins/HGCPassive.cc#L199-371

but you can modify it to get energy in the absorber energy if you can get access
https://gitlab.cern.ch/kalpana/hgcal_reconstruction_framework/-/blob/Gen_simstep/SimG4CMS/HGCalTestBeam/plugins/HGCPassive.cc#L317
